Abstract: Writing is also a productive talent which is meant for communication to deliver messages in the shapes of letters and symbols. In the course of writing for general communication, students are expected to be able to write using several genre of text. Round Table is one of teaching technique which is implemented by cooperative learning approach. The specific purpose of this study is to prove the students responses toward Round Table techniques in improving writing skills in the Writing for General Communication course. This research used a descriptive qualitative. The research conducted in the second semester students at IKIP Siliwangi in the academic year of 2019/2020. Purposive sample is the technique that the researchers taken. The subject of this research consist of 48 students. Questionnaire grid used as instrument in this research. After analyzing the data descriptively, the results show that all of the students were actively involved during the teaching and learning activity. They have a high motivation to learn. The students understand the material easier. The learning process is interesting and not boring. They are motivated to get good achievement because they feel more valued in expressing opinions when learning.

Keyword: Response, Writing, Round Table Technique

Kata kunci: Respon, Menulis, Teknik Round Table
INTRODUCTION
Four core components that must be mastered by students in learning English. They are listening, speaking, reading and writing. The writing component must be mastered by students. Writing is also a productive skill which is meant for communication to deliver messages in the shapes of letters and symbols. Blanchard and Root (1998: 1) as cited in Mundiariyah & Parmawati (2016) state that learning to write in a new language is not always easy. Writing concerns on some aspects such as: content, organization, vocabulary, language, and mechanics. Peha (2010) as cited in (Sari, 2015) pointed out that a good writing should have ideas that are interesting and important, organization that is logical and effective, voice that is individual and appropriate, word choice that is specific and effective, sentence fluency that is smooth and expressive, and conventions that are correct and communicative.

Brown (2000:335) as cited in (Muflikhati, 2013) state that writing is a written product which is completed after the process of thinking, planning, drafting, and revising and also demands efforts and specialized skills of generating ideas, organizing them coherently, making use of the discourse markers and the rhetorical conventions, putting all of them into one, revising the content for a clearer meaning, and editing for accurate grammar into a final product. Moreover, Harmer (2004) as cited in Larasati (2015) states that writing is the only skill which enables learner to produce a real product, in which the product is touchable, readable, as well as keep able for a long period of time. In the course of writing for general communication, students are expected to be able to write using several genre of text.

Based on the observation while teaching the writing for general communication course, we found that most of the second semester students of the English Department of IKIP Siliwangi, still had difficulties in writing several text genres in English. This is due to several factors, including: 1) Difficulty in determining the theme or topic of writing, according to the genre of text they will write, 2) They do not know how to make good, coherent, and unified paragraphs in their writing, so less focus; 3) Motivation in learning to write is lacking because learning techniques are still monotonous.

Many students assume that they are competing with each other. This is a special note from us. Basically through group work they can find alternative ways of learning by expressing and exploring a variety of ideas and experiences in a collaborative atmosphere. This is not about competing with fellow students and winning, but about using the various resources available in groups to deepen understanding, to sharpen assessments and expand knowledge. The various kinds of collaborative learning techniques, one of which can be applied is the Round Table technique.

Round Table is one of teaching technique which is implemented by cooperative learning approach. According to Johnson and Stanne (2000) as cited in Khaghaninezhadb & Kaashef (2014) “cooperative language learning” is a cover term that covers numerous methods for organizing and conducting pedagogical activities in the way that any language teacher can find a way to employ its techniques in his or her instructional philosophies and practices. Sinaga (2017) promoted that roundtable is one of the teaching techniques which is used by the cooperative learning approach.

Rusinovci (2015) declared that the role of the process approach in the roundtable technique is as the systematic direction for students to write cooperatively in a group. Moreover, Sinaga (2017) as cited in Flora, Cahyadi, & Sukirlan (2020) states that...
Roundtable teaching technique is a technique of brainstorming, reviewing or practicing skill in writing which is used to stimulate creativity and deeper thinking as the value of multiple viewpoints and ideas as the result working in team. Round Table technique also encourages students to be active in learning process. Barkley, Cross and Major (2005: 243) as cited in Putri, Susilohadi, & Sulistyawati (2017) state that the structure requires all students to post, and limits some group members from posting too frequently. It means that in Round Table every students need to contribute their ideas for the group’s task. Through this learning technique, it is expected to be able to help students improve their writing skills in a good team/team.

The specific purpose of this study is to prove the students responses toward Round Table techniques in improving writing skills in the Writing for General Communication course.

METHOD
Research Design
This research used a descriptive qualitative. Miles and Huberman (1994) as cited in Latifah & Rahmawati (2019) stated that qualitative research design conducted prolonged and intense contact with field or little situation. Qualitative research method is a research method based on the philosophy of positivism, used to examine natural object conditions (as opposed to experiments) where the researcher is the key instrument, purposive and snowball sampling, data collection techniques, data analysis inductive/qualitative, and the results of qualitative research emphasize more meaning than generalization, (Sugiyono, 2017) . Furthermore, Arikunto (2006) as cited in Purba (2018) said descriptive qualitative design used to describe occurrence, situation and event of basic data was conducted simultaneously with data collection. Qualitative research design discuss about reality and happened. It means that qualitative research design aims to understand the world symbolized meaning in people behavior in society itself.

Subject of the Research
The research conducted in the second semester students at IKIP Siliwangi in the academic year of 2019/2020. The subject of this research consist of 48 students. The campus is located at jl.Terusan Jenderal Sudirman no.3, Baros Cimahi Tengah, West Java. Purposive sample is the technique that the researcher taken. According to Suen, Huang, & Lee (2014) the purposive sampling technique, also called judgment sampling, is the deliberate choice of a participant due to the qualities the participant possesses. It is a nonrandom technique that does not need underlying theories or a set number of participants. Simply put, the researchers decides what needs to be known and sets out to find people who can and are willing to provide the information by virtue of knowledge or experience.

Instrument
Instrument research is the aspect of the accumulation of data that conducted in scientific and as the way or tool used in collecting data. Questionnaire grid adopted from Muhlisin (2018) was used as instrument in this research. The purpose of questionnaire was to investigate the students’ responses toward The Implementation of Round Table Technique in Writing for General Communication Course.

RESULT AND DISCUSSION
Students response towards implementation of Round Table Technique in Writing for General Communication Course. that surveyed by questionnaires with “Yes” and “No” choices in their answers. The students’
responses questionnaire grid can be seen in table 1 and the percentage of Students’ response toward The Implementation of Round Table Technique in Writing for General Communication Course can be seen in figure 1. The percentage of student’s response based on indicator can be seen in table 2.

Table 1

</table>
Based on table 2 that consist of four criterias (attention, relevance, confidence, and satisfaction), it can be conclude that majority of students give positive response towards the implementation of round table technique in writing for general communication course. Round Table technique which is seen as both cooperative and collaborative learning technique was able to change the teaching and learning activity into learner-centered. All of the students were actively involved during the teaching and learning activity. They have a high motivation to learn. The students understand the material easier. The learning process is interesting and not boring. They are motivated to get good achievement because they feel more valued in expressing opinions when learning.

CONCLUSION

Based on data analysis and discussion that has been explained then it can be concluded as follows: 1) Student response after implementation of round table technique gave positive response. 2) Student’s positive response is shown by their activeness in writing for general communication course. 3) The lecturer should use the cooperative learning in the writing activity, so that the students can improve their writing skills by sharing their ideas to others.
